M SERIES

Centrifugal pumps for liquids. High flow rates in a small package
Models with a peak flow ranging from 400ml/min to 9000ml/min

MG SERIES

Gear pumps for liquids. Self priming, reversible, high pressures.
Models with a pressure capability of up to 20 bar

D SERIES

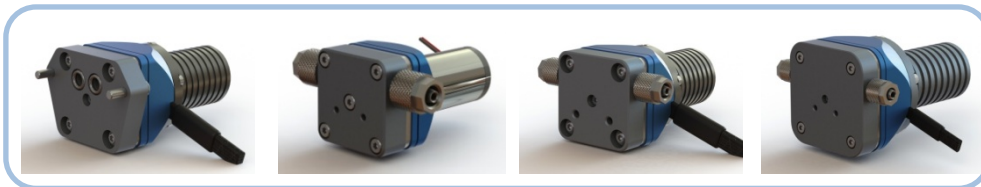

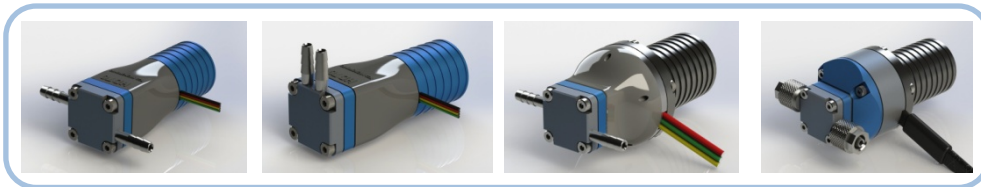

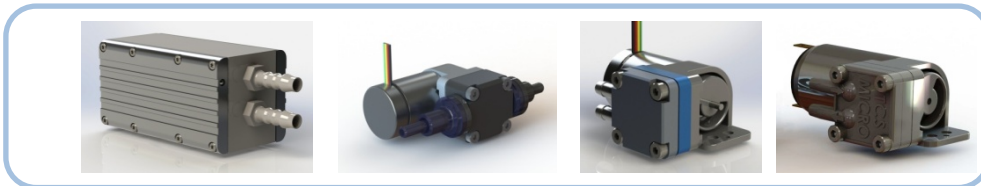

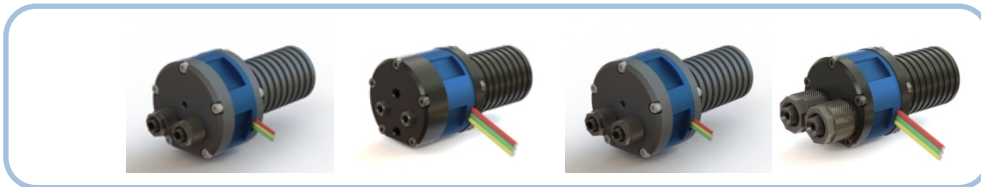

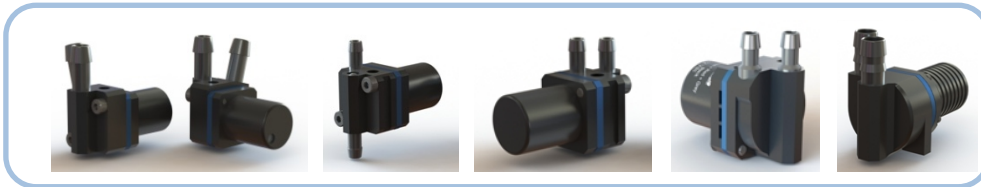

Diaphragm, pumps for gases/liquids. Self priming / high efficiency
Models capable of >0.8 bar and 10 Lpm on gases
and >0.8 bar and 200ml/min on liquids

HD SERIES

Diaphragm, pumps for liquids. Self priming, high pressure dosing pump.
Models capable of between 4-80 ml/min and up to 5 Bar

R SERIES

Conical Revolution pumps for gases and liquids. Self priming and reversible
Designed as a more efficient and reliable replacement for
diaphragm and peristaltic pumping technologies.

Custom Design

TCS Micropumps Ltd manufactures a standard range of patented miniature pumps to satisfy a wide range of requirements. We can tailor any of our pumps or systems and can also provide new, unique solutions developed and tailored exactly to your needs.

New variants and concepts are also designed to suit specific customer requirements by the TCS Micropumps in-house design and development team.

Disposable Pump Heads

TCS has developed a range of low cost disposable pump heads that can be tailored to meet your exact requirements.

The head is then matched to a TCS Micropumps Ltd appropriate quick fit drive unit which provides efficient, reliable and controllable performance for your system. The system also integrates all connections and eliminates dynamic seals.

Manifold Mounting

A range of highly efficient long life pumps, available in different seal materials and configurations to suit a wide range of different chemicals, applications and flow rates.

Specifically designed for easy, installation into your system. Removing the need for connecting pipes makes this pump range extremely reliable yet easy to service when required.
